S U M M A R Y

AI product engineer with over a decade and 40+ client projects across federal, Fortune 500, and studio work. I own the full product lifecycle, from UI/UX and requirements through production, shipping LLM-integrated products end to end in an AI-native workflow, often embedded with clients in a forward-deployed model. I've built the core design system at my last three companies, and I bring professional AI evaluation experience: rubric-based review of frontier coding-agent outputs. 100% WCAG and Section 508 audit record, zero violations. In my free time I build physical AI: voice-controlled robots running locally orchestrated models.

E X P E R I E N C E

Modern Softworks · Founder & Principal AI Product Engineer

Sep 2020 - Present · Remote

Founded a digital product studio and ran it full-time from 2020 to 2022, delivering client projects across web, React Native, and federal work, with recurring retainers lasting 2+ years; now my vehicle for contract engagements. Repositioned twice as the market moved: digital marketing and software development (2020), accessibility auditing and remediation for government agencies (2024), applied AI and LLM evaluation (2026). All work is now delivered AI-natively.

- Ship LLM-integrated products and tools from concept to production, including a vision-based capture assistant (Chrome extension piping screenshots to a multimodal model with an in-context chat overlay) and AI-assisted content tooling, with Claude Code as implementation partner governed by a documented repo-level rules system and quality gates.
- Defined and led ClaimBot, an AI claims-triage assistant for Property Claim Consulting: researched the full claims workflow, designed the UI/UX and user journeys for ClaimBot and its companion CMS for public adjusters, and managed the build team through delivery.
- Designed and built Property Claim Consulting's three-app insurance ecosystem as sole developer: a React + Node/Express claims platform with satellite and 3D walkthrough integrations, a displaced-homeowner rental marketplace, and a public-adjuster certification LMS on Stripe, plus React Native apps.
- Built and maintain a proprietary design system of hundreds of React and TypeScript components that powers every engagement; paired with Claude Code, it has compressed marketing site delivery from ~2 weeks to 2-3 days.
- Delivered Section 508 and WCAG audits and remediation for enterprise and federal clients with a 100% pass record, while hiring and leading a team of 5 plus contractors as technical and design lead.

G2i · AI Evaluation Engineer for OpenAI (Contract)

Apr 2026 - May 2026 · Remote

Helped train and evaluate the latest release of OpenAI's Codex through structured evaluation and human feedback, improving the experience of engineers working with the agent: responses that explain accurately without vagueness or overexplanation, and tasks that are genuinely completed, never claimed.

- Performed rubric-based evaluation of agentic coding outputs, scoring correctness, code quality, instruction adherence, reasoning quality, communication clarity, and honest task completion across complex multi-step software engineering tasks.
- Served as QA reviewer on the contract, auditing and adjudicating other evaluators' submissions for rubric accuracy and scoring consistency, strengthening inter-rater reliability and the quality of human feedback data used to refine model behavior.
- Combined LLM-as-judge techniques with manual code review, writing detailed failure-mode rationales and applying production engineering judgment to human-in-the-loop QA.

Genius AI (Future Mortgage) · VP of Product & AI Product Engineer (Contract)

Feb 2026 - Mar 2026 · Boise, ID

Embedded on contract to ship an MVP (an AI-powered mortgage CRM and marketing site) their existing team couldn't deliver before the next investor conversation. Owned the product roadmap across four applications and delivered both on deadline.

- Designed and shipped a complete Next.js marketing site, building a unified design system (brand identity, logo, typography, color system, components) and motion work with GSAP, Three.js, and CSS keyframes; the design system became the foundation for the CRM rebuild as well.
- Refactored 20+ components and multiple funnels across the CRM using Claude Code, including consolidating a bloated 40-screen borrower application funnel down to 15 and redesigning the UI and flow for the platform's AI-powered features.
- Directed a cross-functional team of 6 across internal staff and offshore contractors, reporting directly to the CEO, while bringing the platform to full WCAG 2.2 compliance with CI/CD quality gates blocking regressions before production.

- Designed AI chatbot interface components in Figma for PagerDuty and Slack, refining the UI/UX and user journeys of customer-facing AI funnels across both engagements.
- Personally built every component to production, owning the frontend code for both customer-facing AI experiences.

Leidit, LLC · Director of Frontend Engineering & Accessibility

Feb 2023 - Feb 2026 · Remote

Product and user experience authority across a 30+ person federal contractor, owning roadmaps for federal client deliverables, internal tools, and revenue-generating commercial SaaS products.

- Owned the entire user-facing product for a USAID humanitarian aid logistics platform tracking \$43B in goods annually across federal agencies, on a two-person engineering team. Designed all user flows and interfaces in Figma, built the complete frontend, created training materials, and traveled internationally to multiple warehouses to train end users on the platform.
- Took over a multimillion-dollar federal contract 2 weeks before launch after a routine Section 508 audit exposed 4,500+ accessibility violations, broken core functionality, and misalignment with client expectations. Rebuilt broken features, resolved every violation, and launched on schedule.
- Built a custom accessible frontend framework and design system within ServiceNow from scratch, replacing all out-of-the-box components with fully Section 508 compliant versions and adding configurable theming. Embedded an AI assistant that let users find records, navigate the platform, and manage work conversationally. Became the foundation for every subsequent ServiceNow engagement. On its first use, it compressed a 10-month delivery estimate to under 2 months.
- Hired and onboarded the entire UI/UX engineering team, designed the interview loop including live code challenges, directly managed three engineers, and established the frontend development standards used across all company projects.

Jobvite · Senior Product Engineer

Jan 2022 - Feb 2023 · Remote

- Embedded with Jobvite's career portal team in a forward-deployed model on Fortune 500 engagements, owning each client relationship outright: requirements, Figma design, stakeholder demos, React build, and deployment. Shipped 20+ complete portals for Dell, Wells Fargo, Bank of America, John Deere, Lowe's, and Taco Bell with 2-4 week turnaround, every portal at 95+ PageSpeed and WCAG 2.1 AA.

EARLIER EXPERIENCE

Full Stack Software Engineer · Rural Sourcing	2020 - 2022
UI/UX Software Engineer · Hewlett Packard	2018 - 2020
Software Engineer · MAP Academy	2016 - 2018

SKILLS

AI Engineering: Claude Code, Claude API, Claude Agent SDK, OpenAI API, Vercel AI SDK, Cursor, Large Language Models (LLMs), Agentic AI, Agentic Coding, AI Agents, Multi-Agent Orchestration, Advanced RAG (Hybrid Search, Re-ranking), Model Context Protocol (MCP), LangGraph, Prompt Engineering, Context Engineering (Context Optimization), Embeddings, Vector Databases (Pinecone, pgvector), LLM Evaluation, Eval Frameworks & Agent Testing, LLM-as-a-Judge, Human-in-the-Loop QA, Guardrails, Structured Outputs & Deterministic Agent Design, AI Observability (Langfuse)

Frontend: React, React Native, TypeScript, JavaScript, Next.js, Tailwind CSS, CSS, shadcn/ui, Radix UI, Vite, Monorepos (Nx, Turborepo), SSR, React Server Components, Core Web Vitals, Redux/RTK Query, Zustand, TanStack Query, tRPC, Zod, WebSockets, Server-Sent Events, GSAP, Framer Motion, Three.js, Design Tokens

Backend & Data: Node.js, Express, Python, FastAPI, REST API Design, JSON, GraphQL, OpenAPI/Swagger, Microservices, Authentication (OAuth, JWT), Webhooks, Stripe Payments, PostgreSQL, Supabase, Prisma, SQL, Redis, Schema Design, Row-Level Security

Design & UX: Figma, Claude Design, Design Systems Architecture, Component Libraries, UI/UX Design, Prototyping, Interaction Design, Progressive Disclosure, Information Architecture, User Research, Usability Testing, SEO

Accessibility: WCAG 2.2, Section 508, ARIA, ADA Compliance, Screen Reader Testing (JAWS, NVDA, VoiceOver), Accessibility Auditing & Remediation, VPAT

Product & Leadership: Product Strategy, Roadmapping, Requirements Definition, Technical Demos & Pre-Sales, Solution Scoping, Workshop Facilitation, Stakeholder Management, Technical Leadership, Cross-Functional Leadership, Hiring & Mentorship, A/B Testing

Infrastructure & Testing: Vercel, AWS (Lambda, S3, CloudFront), Docker, GitHub, GitHub Actions, CI/CD Pipelines, Playwright, Vitest, Cypress

FEATURED PROJECT

Ask the Claude Docs · ask-the-claude-docs.vercel.app · RAG assistant over the Claude Code docs: cited answers, honest refusals when retrieval lacks grounding, and a CI eval harness gating every PR. Evals at ship: 0.85 hit@5, 0.70 MRR, 0.90 judged answer quality, 5/5 correct refusals on off-corpus questions. Public repo with full decision log.

EDUCATION
