SUMMARY

AI product engineer and design engineer with 11 years across federal, Fortune 500, and 40+ studio clients. I own the full product lifecycle, from UI/UX and requirements through production, shipping LLM-integrated products end to end in an AI-native workflow, often in a forward-deployed model embedded with clients. Professional LLM evaluation experience: rubric-based review of frontier coding-agent outputs. 100% WCAG and Section 508 audit record, zero violations. In my free time I build physical AI: voice-controlled robots running locally orchestrated models.

SKILLS

AI Engineering: Claude Code, Claude API, Claude Agent SDK, OpenAI API, Vercel AI SDK, Cursor, Large Language Models (LLMs), Agentic AI, Agentic Coding, AI Agents, Multi-Agent Orchestration, Advanced RAG (Hybrid Search, Re-ranking), Model Context Protocol (MCP), LangGraph, Prompt Engineering, Context Engineering (Context Optimization), Embeddings, Vector Databases (Pinecone, pgvector), LLM Evaluation, Eval Frameworks & Agent Testing, LLM-as-Judge, Human-in-the-Loop QA, Guardrails, Structured Outputs & Deterministic Agent Design, AI Observability (Langfuse)

Frontend: React, React Native, TypeScript, JavaScript, Next.js, Tailwind CSS, CSS, shadcn/ui, Radix UI, Vite, Monorepos (Nx, Turborepo), SSR, React Server Components, Core Web Vitals, Redux/RTK Query, Zustand, TanStack Query, tRPC, Zod, WebSockets, Server-Sent Events, GSAP, Framer Motion, Three.js, Design Tokens

Backend & Data: Node.js, Express, Python, FastAPI, REST API Design, JSON, GraphQL, OpenAPI/Swagger, Microservices, Authentication (OAuth, JWT), Webhooks, Stripe Payments, PostgreSQL, Supabase, Prisma, SQL, Redis, Schema Design, Row-Level Security

Design & UX: Figma, Claude Design, Design Systems Architecture, Component Libraries, UI/UX Design, Prototyping, Interaction Design, Progressive Disclosure, Information Architecture, User Research, Usability Testing, SEO

Accessibility: WCAG 2.2, Section 508, ARIA, ADA Compliance, Screen Reader Testing (JAWS, NVDA, VoiceOver), Accessibility Auditing & Remediation, VPAT

Product & Leadership: Product Strategy, Roadmapping, Requirements Definition, Workshop Facilitation, Stakeholder Management, Technical Leadership, Cross-Functional Leadership, Hiring & Mentorship, A/B Testing

Infrastructure & Testing: Vercel, AWS (Lambda, S3, CloudFront), Docker, GitHub, GitHub Actions, CI/CD Pipelines, Playwright, Vitest, Cypress, ServiceNow (Service Portal, Scripted REST APIs)

EXPERIENCE

Modern Softworks — Founder & Principal AI Product Engineer

Sep 2020 - Present · Remote

Founded and grew an accessibility-first digital studio to 40+ clients across marketing sites, web and React Native applications, AI products, and federal accessibility work. Named clients include USAID and PagerDuty. Generated \$1.8M+ in lifetime revenue, with 25%+ from recurring retainers (some lasting 2+ years).

- Ship LLM-integrated products and tools end to end, including a vision-based capture assistant (Chrome extension piping screenshots to a multimodal model with an in-context chat overlay) and AI-assisted content tooling. All studio work is delivered AI-natively: Claude Code as implementation partner, governed by a documented repo-level rules system with mandatory accessibility and quality gates.
- Designed and built Property Claim Consulting's three-app insurance ecosystem end to end as sole developer: a React + Node/Express claims platform with satellite and 3D walkthrough integrations, a displaced-homeowner rental marketplace and subscription LMS on Stripe, and React Native apps across the ecosystem. MVP in 3 months, full ecosystem in under 12.
- Built and maintain a proprietary design system of hundreds of React and TypeScript components, utilities, and accessibility primitives that powers every engagement. Paired with Claude Code and Claude Design, it has compressed marketing site delivery from ~2 weeks to 2-3 days end to end.
- Deliver Section 508 and WCAG audits and remediation for enterprise and federal clients with a 100% pass record, consistently shipping 95+ Lighthouse scores and sub-2s loads across React, TypeScript, and Next.js builds.
- Personally hired, onboarded, and led a team of 5, plus contractors, across concurrent engagements, operating as technical and design lead throughout.

G2i — LLM Evaluation Engineer & QA Reviewer (Contract)

Apr 2026 - May 2026 · Remote

Worked on the evaluation and human feedback layer for frontier autonomous coding agents, improving model behavior and the user experience of AI coding tools through structured evaluation and reviewer-level quality control.

- Performed rubric-based evaluation of agentic coding outputs, scoring correctness, code quality, instruction adherence, reasoning quality, and task completion across complex multi-step software engineering tasks.
- Served as QA reviewer on the contract, auditing and adjudicating other evaluators' submissions for rubric accuracy and scoring consistency, strengthening inter-rater reliability and the quality of human feedback data used to refine model behavior.
- Combined LLM-as-judge techniques with manual code review, writing detailed failure-mode rationales and applying production engineering judgment to human-in-the-loop QA.

Genius AI (Future Mortgage) — VP of Product & AI Product Engineer (Contract)

Feb 2026 - Mar 2026 · Boise, ID

Brought in to ship an MVP (an AI-powered mortgage CRM and marketing site) their existing team couldn't deliver before the next investor conversation. Owned the product roadmap across four applications and delivered both on deadline.

- Designed and shipped a complete Next.js marketing site end to end, building a unified design system (brand identity, logo, typography, color system, components) and motion work with GSAP, Three.js, and CSS keyframes. The design system became the foundation for the CRM rebuild as well.
- Refactored 20+ components and multiple funnels across the CRM using Claude Code, including consolidating a bloated 40-screen borrower application funnel down to 15 and redesigning the UI and flow for the platform's AI-powered features.
- Resolved accessibility across the platform to full WCAG 2.2 and Section 508 compliance, and built CI/CD quality gates that blocked accessibility, performance, and type regressions before production.
- Directed a cross-functional team of 6 across internal staff and offshore contractors, reporting directly to the CEO on product direction.

Leidit, LLC — Director of Frontend Engineering & Accessibility

Feb 2023 - Feb 2026 · Remote

Product, frontend, and accessibility authority across a 30+ person federal contractor, owning roadmaps for federal client deliverables, internal tools, and revenue-generating commercial SaaS products as the sole Section 508 expert.

- Owned the entire user-facing product for a USAID humanitarian aid logistics platform tracking \$43B in goods annually across federal agencies, on a two-person engineering team. Designed all user flows and interfaces in Figma, built the complete frontend, created training materials, and traveled internationally to multiple warehouses to train end users on the platform.
- Took over a multimillion-dollar federal contract 2 weeks before launch after a routine Section 508 audit exposed 4,500+ accessibility violations, broken core functionality, and misalignment with client expectations. Rebuilt broken features, resolved every violation, and launched on schedule.
- Built a custom accessible frontend framework and design system within ServiceNow from scratch, replacing all out-of-the-box components with fully Section 508 compliant versions and adding configurable theming. Embedded an AI assistant that let users find records, navigate the platform, and manage work conversationally. Became the foundation for every subsequent ServiceNow engagement. On its first use, it compressed a 10-month delivery estimate to under 2 months.
- Hired and onboarded the entire UI/UX engineering team, designed the interview loop including live code challenges, directly managed three engineers, and established the frontend development standards used across all company projects.

Jobvite — Senior Product Engineer

Jan 2022 - Feb 2023 · Remote

- Embedded with Jobvite's career portal team in a forward-deployed model on Fortune 500 engagements, owning each client relationship end-to-end: requirements, Figma design, stakeholder demos, React build, and deployment. Shipped 20+ complete portals for Dell, Wells Fargo, Bank of America, John Deere, Lowe's, and Taco Bell with 2-4 week turnaround, every portal at 95+ PageSpeed and WCAG 2.1 AA.

EARLIER EXPERIENCE

Full Stack Software Engineer · Rural Sourcing	2020 - 2022
UI/UX Software Engineer · Hewlett Packard	2018 - 2020
Software Engineer · MAP Academy	2016 - 2018

FEATURED PROJECT

Ask the Claude Docs · ask-the-claude-docs.vercel.app · RAG assistant over the Claude Code docs: cited answers, honest refusals when retrieval lacks grounding, and a CI eval harness gating every PR. Evals at ship: 0.85 hit@5, 0.70 MRR, 0.90 judged answer quality, 5/5 correct refusals on off-corpus questions. Public repo with full decision log.

EDUCATION

Associate of Science, Computer Programming · Augusta Technical College	Augusta, GA
